Software di aggiornamento della scheda di applicazione (istruzioni originali)

www.ditecautomations.com

# AVVERTENZE GENERALI PER LA SICUREZZA

ATTENZIONE! Conservate le presenti istruzioni per futuri riferimenti • L'installazione, i collegamenti elettrici e le regolazioni devono essere effettuati da personale tecnico qualificato nell'osservanza della Buona Tecnica e in ottemperanza alle norme vigenti • Questo prodotto dovrà essere destinato solo all'uso per il quale è stato espressamente concepito. Ogni altro uso è da considerarsi improprio e quindi pericoloso. Il costruttore non può essere considerato responsabile per eventuali danni causati da usi impropri, erronei ed irragionevoli • Leggere attentamente le istruzioni prima di iniziare l'installazione del prodotto. Una errata installazione può essere fonte di pericolo • Prima di iniziare l'installazione verificare l'integrità del prodotto • Non installare il prodotto in ambiente e atmosfera esplosivi: presenza di gas o fumi infiammabili costituiscono un grave pericolo per la sicurezza • Pericolo di esplosione se la batteria viene sostituita con una di tipo non corretto • I materiali dell'imballaggio (plastica, polistirolo, ecc.) non vanno dispersi nell'ambiente e non devono essere lasciati alla portata dei bambini in quanto potenziali fonti di pericolo.

3.7	AGGIORNAMENTO	9
3.0 3.9	SERIALE PERSO	, 10

Questo simbolo indica note e/o informazioni utili al corretto funzionamento del prodotto.

Questo simbolo indica nota relative alla sicurezza a cui prestare particolare attenzione.

# 1. SCOPO DEL MANUALE

Questa guida descrive l'uso del software FlashIT. Il software che deve essere utilizzato esclusivamente con i prodotti Ditec. La descrizione è fornita attraverso immagini delle diverse finestre, gestite dal software stesso.

# 2. INSTALLAZIONE HARDWARE

## 2.1 USB – PROG

L'aggiornamento del firmware è possibile solo se si dispone dell'adattatore di serie USB PROG. Viene fornito come strumento separato e deve essere richiesto ai servizi di Ditec. Il cavo di collegamento è incluso.

Il dispositivo USB PROG ha un connettore dedicato che si inserisce facilmente nel connettore della scheda che gestisce la memoria esterna.

Individuare il connettore della memoria sulla scheda da aggiornare, quindi estrarre delicatamente la scheda e inserire il programmatore USB PROG, facendo attenzione a rispettare la direzione di collegamento.

È necessario prestare attenzione al senso di inserimento al connettore.

# 3. DETTAGLI SOFTWARE

## 3.1 SCHERMATA INIZIALE

All'avvio, a schermo, compare il logo DITEC. La durata dell'immagine è di circa 1 secondo.

## 3.2 PAGINA PRICIPALE

Al termine della schermata iniziale, appare la schermata principale qui riportata.

IP2468IT

### 3.3 LINGUE DISPONIBILI

All'avvio del software, la lingua preimpostata è sempre l'inglese. Facendo clic sulle lingue disponibili, si apre un menu a tendina in cui è possibile selezionare la lingua desiderata. Una volta selezionata la nuova lingua, tutte le informazioni saranno immediatamente tradotte nella nuova lingua, anche per le finestre non ancora attive.

### 3.4 SELEZIONE COM

1)COM Selection     Serial Interface	X 1) COM Selection Senal Interface	>
COM3 V Open Serial Select USB port please	COM24 Cose serial Gose serial I regularly to be used.	
Service Ok Back	Service CK Bac	<b>*</b>

Prima di iniziare qualsiasi attività, è necessario attivare una porta seriale che verrà utilizzata dal software per scaricare gli aggiornamenti della scheda.

La porta seriale deve essere scelta tra quelle disponibili sul PC. L'elenco completo di quelle disponibili si ottiene facendo clic sulla casella combinata in alto a sinistra (COMxx), nella sezione Interfacce.

Una volta individuata la porta, occorre aprirla facendo clic sul pulsante a destra della casella combinata OPEN SERIAL. Se la seriale è idonea all'uso, la finestra cambia colore in verde.

**NOTA SULLA PORTA SERIALE:** Molto spesso capita che nel PC in uso siano collegate diverse porte seriali USB. Non è certo che la porta seriale scelta sia quella corretta. Se si sceglie la porta sbagliata, non si arreca alcun danno al PC o ai dispositivi collegati. Non succede nulla di grave. Avendo un po' di pratica con i dispositivi digitali, come i computer, è possibile verificare il numero della porta USB aprendo la pagina di gestione dispositivi nella sezione Pannello di controllo. Questa sezione fornisce informazioni sul numero assegnato dinamicamente alla porta collegata.

Nelle immagini qui sopra, si possono vedere i cambiamenti derivanti dal collegamento dell'U-SB-PROG prima e dopo. Quando l'USB-PROG è collegato (in questo esempio), viene creata la porta COM n° 4.

## 3.5 COMUNICAZIONE DELLA SCHEDA

Per l'aggiornamento del firmware, è particolarmente importante che il software si colleghi correttamente alla scheda interessata dall'aggiornamento.

Il processo di connessione avviene automaticamente, senza bisogno di interventi manuali, purché sia soddisfatta una condizione. Ovvero: quando la scheda è accesa, il software è già stato lanciato e la schermata sottostante è stata aperta.

you must power cycle the load using the main power supply. This automatically connects the software to the load making it possible to update.	Upd	ate		

IP2468IT

Come si può notare, il pulsante OPEN è abilitato per aprire il file di aggiornamento.

Se la scheda viene accesa prima che il software sia attivo, non ci sarà alcuna connessione. Per ovviare a questo problema, è possibile (con il software già attivato) spegnere e riaccendere la scheda. Il processo di connessione si attiva entro circa mezzo secondo dalla prima accensione della scheda.

Dopo questo tempo, se il software non è aperto, non ci sarà alcuna connessione.

#### 3.6 FILE APERTO

∕₽

Il file da caricare deve essere un file binario, con estensione .**bin**. Anche il tipo di file è già indicato nel nome perché ha il prefisso **E\_**. I file con caratteristiche diverse non possono essere gestiti e vengono automaticamente rifiutati dal software.

Nome del file con prefisso **E\_** :

## 3.8 FINE PROCESSO

Il processo di aggiornamento, una volta avviato, è automatico e non richiede ulteriori interventi. Il software supervisiona le operazioni di aggiornamento e, al termine, verrà avviato un reset della scheda che partirà con la nuova versione installata.

DITEC S.J	p.A Custom Downloader	$\times$
1	The microcontroller was correctly updated ! PLEASE NOW DISCONNECT THE USB PROG DEVICE PORT FROM THE BOARD. BY DOING SO, THE SOFTWARE WILL AGAIN PREPARE ITSELF TO PROGRAM A NEW BOARD, IF NECESSARY.	
	ОК	

# IP2468IT

## 3.9 SERIALE PERSO

Se, durante il processo di aggiornamento, la porta seriale viene scollegata o, peggio ancora, la scheda viene spenta per errore, il processo di aggiornamento si interrompe immediatamente, lasciando il firmware "sospeso" a metà.

Questa condizione non è problematica se vengono ripristinate le condizioni iniziali, cioè la seriale collegata correttamente e la scheda alimentata.

Connect the USB programming device to the card connector by removing the internal memory card.		Board co	rrectly connett	ed to host PC.

	Upd	late			
	FATAL E	RROR III S	erial communit	ation has just been k	ost.

Se si verifica questa condizione di errore, viene visualizzato il seguente messaggio. È molto importante ripristinare le condizioni corrette, altrimenti la scheda è completamente inutile. Ristabilendo la connessione seriale e riaccendendo la scheda, sarà nuovamente possibile aggiornare la scheda.

# User manual Ditec FlashIT Application Card Update Software (Translation of the original instructions)

www.ditecautomations.com

# **GENERAL SAFETY INSTRUCTIONS**

WARNING! Keep these instructions for future reference • Installation, electrical connections and adjustments must be performed by qualified personnel in accordance with Good Working Methods and in compliance with the current standards • This product must only be used for the specific purpose for which it was designed. Any other use is to be considered improper and therefore dangerous. The manufacturer cannot be held responsible for any damage caused by improper, incorrect or unreasonable use • Read the instructions carefully before installing the product. Incorrect installation may cause danger • Before installing the product, make sure it is in perfect condition • Do not install the product in explosive areas and atmospheres: the presence of inflammable gas or fumes represents a serious safety hazard • Danger of explosion if a battery is replaced with an incorrect type • The packaging materials (plastic, polystyrene, etc.) should not be discarded in the environment or left within reach of children, as they are a potential source of danger.

This symbol indicates notes and/or information useful or the correct operation of the product.

This symbol indicates a note regarding safety, to which special attention must be paid.

# 1. PURPOSE OF THE GUIDE

This guide describes the use of the FlashIT software. Software that must be used exclusively with Ditec products. The description is provided through images of the different windows, managed by the software itself.

# 2. HARDWARE SET UP

### 2.1 USB – PROG

The firmware update is only possible if you have the USB serial adapter PROG. It is supplied as a separate tool and must be requested from Ditec services. Connection cable included.

The USB PROG device has a dedicated connector that easily plugs into the connector on the board that manages the external memory.

Locate the memory connector on the board to be updated, then gently pull the board out and insert the USB PROG programmer, taking care to respect the direction of connection.

Indicated by the arrow, the insertion key on the connector you must pay attention to.

# 3. SOFTWARE DETAILS

## 3.1 INITIAL SCREEN

At startup, the DITEC logo, via a simple splash screen form, is always represented. The duration of the image is about 1 seconds.

#### 3.2 MAIN WINDOW

At the end of the initial screen, the main screen shown here appears.

## 3.3 AVAILABLE LANGUAGES

When starting the software, the language available at start-up is always English. By clicking on the available languages, a drop-down menu will open in which the desired language can be selected. Once the new language is selected, all information will immediately be translated into the new language, even for windows that are not yet active.

## 3.4 COM SELECTION

1)COM Selection	× 🖊 1) COM Selection	×
Serial Interface	Serial Interface	
COM3 Open Serial	e serial port ot open yet.	erial erial erial erial is regularly opened and ready to be used.
Service Ok	Service Back Ø	Back

Before starting any activity, a serial port must be activated, which will be used by the software to download updates to the board.

The serial port must be chosen from those available on the PC. You can get a complete list of those available by clicking on the combo box at the top left (COMxx), in the Interfaces section. Once the door has been located, it must be opened by clicking on the button to the right of the OPEN SERIAL combo box. If the serial is suitable for use, the window changes color to green.

**NOTE ABOUT SERIAL PORT:** It very often happens that there are several USB serial ports connected in the PC in use. It is not certain whether the chosen serial port is the correct one. If the wrong port is chosen, no damage is done to the PC or the connected devices. Nothing serious happens.

Having some practice with digital devices, such as computers, you can check the USB port number by opening the Device Manager in the Control Panel section. This section provides information about the number dynamically assigned to the connected port.

In the pictures above, one can see the changes resulting from connecting the USB-PROG before and after. When the USB-PROG is plugged in (in this example), COM port N°4 is created

### 3.5 BOARD COMMUNICATION

For the firmware update, it is especially important that the software connects correctly to the board affected by the update.

The connection process takes place automatically, without the need for manual intervention, provided one condition is met. That is, when the board is switched on, the software has already been launched, and the screen below has been opened.

UPDATING PROCEDURES	Board Connection		
<ol> <li>Connect the USB programming device to the card connector by removing the internal memory card.</li> </ol>	Connect the USB Prog. device	e to the board, for updating.

making it possible to update.						
·	Update					

IP2468EN

As can be seen, the **OPEN** button is enabled to open the update file.

If the board is switched on before the software is active, there will be no connection. To get around this, it is possible (with the software already activated) to switch the board off and on again. The connection process is activated within about half a second after the board is first switched on. After this time, if the software is not open, there will be no connection.

#### 3.6 FILE OPEN

<u>/!</u>`

The file to be uploaded must be a binary file, with the extension .bin. The file type is also already indicated in the name because it has the prefix **E**\_. Files with different characteristics cannot be handled and are automatically rejected by the software.

File name with prefix E\_ :

	Contra Cope				

#### 3.8 END OF PROCESS

The update process, once started, is automatic and does not require further intervention. The software supervises the update operations, and at the end, a reset of the card will be started which will start with the new version installed.

## 3.9 SERIAL LOST

If, during the update process, the serial port is disconnected or, even worse, the card is switched OFF by mistake, the update process stops immediately, leaving the firmware "hang-ing" in the middle.

This condition is not problematic if the initial conditions are restored, i.e. the serial connected correctly, and the board powered.

UPDATING PROCEDURES	Board Connection	n			
<ol> <li>Connect the USB programming device to the card connector by removing the internal memory card.</li> </ol>		Board co	rectly connett	ed to host PC.

# CONSIGNES GÉNÉRALES DE SÉCURITÉ

ATTENTION ! Conserver les présentes instructions pour de futures consultations • L'installation, les raccordements électriques et les réglages doivent être effectués par un technicien qualifié selon les règles de la bonne technique et conformément aux normes en vigueur • Ce produit n'est destiné qu'à l'utilisation pour laquelle il a été conçu. Toute autre utilisation doit être considérée comme impropre et donc dangereuse. Le fabricant ne peut pas être considéré responsable d'éventuels dommages causés par un usage impropre, irrationnel ou erroné • Lire les instructions avec beaucoup d'attention avant d'installer le produit. Une mauvaise installation peut être source de danger • Avant de commencer l'installation, contrôler l'intégrité du produit • Ne jamais installer le produit dans un milieu de travail ou une atmosphère explosive: la présence de gaz ou de fumées inflammables représente un grave danger pour la sécurité • Danger d'explosion si la batterie est remplacée par un autre type incorrect • Les matériaux qui composent l'emballage (plastique, polystyrène, etc.) ne doivent pas être abandonnés dans la nature ni laissés à la portée des enfants car ils représentent des risques de danger.

Ce symbole indique des informations utiles pour le fonctionnement correct du produit.

Ce symbole indique des informations relatives à la sécurité qui doit faire l'objet d'une attention particulière.

# 1. OBJECTIF DU GUIDE

Ce guide décrit l'utilisation du logiciel FlashIT. Il s'agit d'un logiciel qui doit être utilisé exclusivement avec les produits Ditec. La description est fournie à travers des images des différentes fenêtres, gérées par le logiciel lui-même.

# 2. INSTALLATION DU HARDWARE

#### 2.1 USB – PROG

La mise à jour du firmware n'est possible que si vous disposez de l'adaptateur série USB PROG. Il est fourni séparément et doit être demandé aux services de Ditec. Câble de connexion inclus.

Le dispositif USB PROG dispose d'un connecteur dédié qui se branche facilement sur le connecteur de la carte qui gère la mémoire externe.

Localisez le connecteur de la mémoire sur la carte à mettre à jour, puis retirez doucement la carte et insérez le programmateur USB PROG, en respectant le sens de connexion.

Indiquée par la flèche, la touche d'insertion sur le connecteur doit être respectée.

# 3. DÉTAILS DU LOGICIEL

# 3.1 ÉCRAN INITIAL

Au démarrage, le logo DITEC est toujours représenté sous la forme d'un simple écran de démarrage. La durée de l'image est d'environ 1 seconde.

# 3.2 FENÊTRE PRINCIPALE

A la fin de l'écran initial, l'écran principal représenté ici apparaît.

IP2468FR

## 3.3 LANGUES DISPONIBLES

Au démarrage du logiciel, la langue disponible au démarrage est toujours l'anglais. En cliquant sur les langues disponibles, un menu déroulant s'ouvre et permet de sélectionner la langue souhaitée.

Une fois la nouvelle langue sélectionnée, toutes les informations seront immédiatement traduites dans la nouvelle langue, même pour les fenêtres qui ne sont pas encore actives.

# 3.4 SÉLECTION DU COM

<ul> <li>Serial Interface</li> </ul>	X 1)COM Selection Serial interface
COM3 Open Serial Select USB port please	COM24 Close serial Is regularly opened and ready to be used.
Service OK Back	Service Ok Back

Avant de commencer toute activité, il faut activer un port série qui sera utilisé par le logiciel pour télécharger les mises à jour de la carte. Le port série doit être choisi parmi ceux disponibles sur le PC. Vous pouvez obtenir une liste complète des ports disponibles en cliquant sur la liste déroulante en haut à gauche (COMxx), dans la section Interfaces.

Une fois la porte localisée, il faut l'ouvrir en cliquant sur le bouton situé à droite de la liste déroulante OPEN SERIAL. Si la série est utilisable, la fenêtre devient verte.

P2468FR

**REMARQUE CONCERNANT LE PORT SÉRIE :** il arrive très souvent que plusieurs ports série USB soient connectés au PC en cours d'utilisation. Il n'est pas certain que le port série choisi soit le bon. Si le port choisi n'est pas le bon, aucun dommage n'est causé au PC ou aux appareils connectés. Rien de grave ne se produit. Si vous avez l'habitude d'utiliser des appareils numériques, tels que des ordinateurs, vous pouvez vérifier le numéro du port USB en ouvrant le Gestionnaire de périphériques dans la section Panneau de configuration. Cette section fournit des informations sur le numéro attribué dynamiguement au port connecté.

Dans les images ci-dessus, on peut voir les changements résultant de la connexion de l'USB-PROG avant et après.

Lorsque l'USB-PROG est branché (dans cet exemple), le port COM N°24 est créé.

# 3.5 COMMUNICATION PAR CARTE ÉLECTRONIQUE

Pour la mise à jour du micrologiciel, il est particulièrement important que le logiciel se connecte correctement à la carte concernée par la mise à jour.

Le processus de connexion se déroule automatiquement, sans intervention manuelle, à condition qu'une condition soit remplie. Lorsque la carte est mise sous tension, le logiciel a déjà été lancé et l'écran ci-dessous s'est ouvert.

IP2468FR

Comme on peut le voir, le bouton OPEN est activé pour ouvrir le fichier de mise à jour.

Si la carte est allumée avant que le logiciel ne soit actif, il n'y aura pas de connexion. Pour contourner ce problème, il est possible (lorsque le logiciel est déjà activé) d'éteindre et de rallumer la carte. Le processus de connexion est activé environ une demi-seconde après la première mise sous tension de la carte. Passé ce délai, si le logiciel n'est pas ouvert, il n'y aura pas de connexion.

#### 3.6 FICHIER OUVERT

Le fichier à télécharger doit être un fichier binaire, avec l'extension .bin. Le type de fichier est également déjà indiqué dans le nom, car il porte le préfixe E\_. Les fichiers présentant des caractéristiques différentes ne peuvent pas être traités et sont automatiquement rejetés par le logiciel.

Nom de fichier avec préfixe E\_ :

#### 3.8 FIN DU PROCESSUS

Le processus de mise à jour, une fois lancé, est automatique et ne nécessite aucune autre intervention. Le logiciel supervise les opérations de mise à jour et, à la fin, une réinitialisation de la carte est lancée avec la nouvelle version installée.

# 3.9 SERIE PERDUE

Si, pendant le processus de mise à jour, le port série est déconnecté ou, pire encore, si la carte est éteinte par erreur, le processus de mise à jour s'arrête immédiatement, laissant le micro-logiciel « en suspens » au milieu.

Cette situation n'est pas problématique si les conditions initiales sont rétablies, c'est-à-dire si le port série est correctement connecté et si la carte est alimentée.

1) Connect the USB programming device to the card connector by removing the internal memory card. 2) Once connected, the software will automatically onnect to the card. Si vous entrez dans cette condition d'erreur, le message suivant s'affiche.

Il est très important de rétablir les conditions correctes, sinon la carte est complètement inutilisable.

En rétablissant la connexion série et en remettant la carte sous tension, il sera à nouveau possible de mettre à jour la carte.

Dieses Symbol verweist auf Hinweise zur Sicherheit, auf die besonders geachtet werden muss.

# 1. ZWECK DES HANDBUCHS

Diese Anleitung beschreibt die Verwendung der FlashIT-Software. Eine Software, die ausschließlich mit Ditec-Produkten verwendet werden darf. Die Beschreibung erfolgt durch Abbildungen der verschiedenen Fenster, die von der Software selbst verwaltet werden.

# 2. HARDWARE EINRICHTEN

# 2.1 USB – PROG

Das Firmware-Update ist nur möglich, wenn Sie den seriellen USB-Adapter PROG besitzen. Er wird als separates Tool geliefert und muss beim Ditec-Service angefordert werden. Das Anschlusskabel ist im Lieferumfang enthalten.

Das USB-PROG-Gerät verfügt über einen speziellen Anschluss, der sich leicht in den Anschluss auf der Karte einstecken lässt, die den externen Speicher verwaltet.

Suchen Sie den Speicheranschluss auf der zu aktualisierenden Platine, ziehen Sie die Platine vorsichtig heraus und stecken Sie das USB PROG-Programmiergerät ein, wobei Sie auf die Anschlussrichtung achten müssen.

Die Einsteckrichtung ist durch einen Pfeil gekennzeichnet, den Sie unbedingt beachten müssen.

# 3. SOFTWARE EINZELHEITEN

### 3.1 ANFANGSBILDSCHIRM

Beim Einschalten wird immer das DITEC-Logo in Form eines einfachen Startbildes angezeigt. Die Dauer des Bildes beträgt etwa 1 Sekunde.

#### 3.2 HAUPTFENSTER

Am Ende des Startbildschirms erscheint der hier abgebildete Hauptbildschirm.

IP2468DE

# 3.3 VERFÜGBARE SPRACHEN

Beim Starten der Software ist die verfügbare Sprache beim Start immer Englisch. Wenn Sie auf die verfügbaren Sprachen klicken, öffnet sich ein Dropdown-Menü, in dem Sie die gewünschte Sprache auswählen können. Sobald die neue Sprache ausgewählt ist, werden alle Informationen sofort in die neue Sprache übersetzt, auch für Fenster, die noch nicht aktiv sind.

## 3.4 COM SELECTION

Serial Interface	Serial Interface
COM3 Copen Serial Select USB port please	COM24 Close serial Close serial Is regularly opened and ready to be used.
Service CK Back	Service Ok Back

Vor Beginn jeglicher Aktivität muss eine serielle Schnittstelle aktiviert werden, die von der Software zum Herunterladen von Updates auf die Karte verwendet wird.

Die serielle Schnittstelle muss aus den auf dem PC verfügbaren ausgewählt werden. Eine vollständige Liste der verfügbaren Schnittstellen erhalten Sie, wenn Sie auf das Kombinationsfeld oben links (COMxx) im Abschnitt Schnittstellen klicken.

Sobald die Tür gefunden wurde, muss sie durch Klicken auf die Schaltfläche rechts neben dem Kombinationsfeld **OPEN SERIAL** geöffnet werden. Wenn die serielle Schnittstelle für die Verwendung geeignet ist, ändert sich die Farbe des Fensters auf grün.

HINWEIS ZUM SERIELLEN ANSCHLUSS: Es kommt sehr häufig vor, dass mehrere serielle USB-Anschlüsse an den verwendeten PC angeschlossen sind. Es ist nicht sicher, ob der gewählte serielle Anschluss der richtige ist. Wenn der falsche Anschluss gewählt wird, entsteht weder am PC noch an den angeschlossenen Geräten ein Schaden. Es passiert nichts Ernstes. Wenn Sie etwas Übung im Umgang mit digitalen Geräten, wie z. B. Computern, haben, können Sie die Nummer des USB-Anschlusses überprüfen, indem Sie den Geräte-Manager in der Systemsteuerung öffnen. Dieser Abschnitt enthält Informationen über die Nummer, die dem angeschlossenen Anschluss dynamisch zugewiesen wird.

In den obigen Bildern kann man die Veränderungen sehen, die sich durch den Anschluss des USB-PROGs vorher und nachher ergeben. Wenn der USB-PROG eingesteckt ist (in diesem Beispiel), wird der COM-Port Nr. 24 erstellt.

#### 3.5 BOARDKOMMUNIKATION

Für das Firmware-Update ist es besonders wichtig, dass sich die Software korrekt mit der vom Update betroffenen Karte verbindet.

Der Verbindungsvorgang erfolgt automatisch, ohne dass ein manuelles Eingreifen erforderlich ist, sofern eine Bedingung erfüllt ist. Das heißt, wenn die Karte eingeschaltet wird, ist die Software bereits gestartet und der unten stehende Bildschirm geöffnet worden.

P2468DE

Wie Sie sehen können, ist die Schaltfläche OPEN aktiviert, um die Aktualisierungsdatei zu öffnen.

Wenn die Karte eingeschaltet wird, bevor die Software aktiv ist, kommt keine Verbindung zustande. Um dies zu umgehen, ist es möglich (bei bereits aktivierter Software), die Karte ausund wieder einzuschalten. Der Verbindungsvorgang wird innerhalb von etwa einer halben Sekunde nach dem ersten Einschalten der Karte aktiviert. Ist die Software nach dieser Zeit nicht geöffnet, kommt keine Verbindung zustande.

#### 3.6 FILE OPEN

Die hochzuladende Datei muss eine Binärdatei mit der Endung .bin sein. Der Dateityp ist auch schon im Namen angegeben, da er das Präfix **E**\_ hat. Dateien mit anderen Eigenschaften können nicht bearbeitet werden und werden von der Software automatisch abgelehnt.

Dateiname mit Präfix E\_ :

#### 3.8 ENDE DES PROZESSES

Der einmal gestartete Aktualisierungsprozess erfolgt automatisch und erfordert keine weiteren Eingriffe. Die Software überwacht die Aktualisierungsvorgänge, und am Ende wird ein Reset der Karte gestartet, der mit der installierten neuen Version beginnt.

# IP2468DE

## 3.9 SERIELLER VERLUST

Wenn während des Aktualisierungsvorgangs die serielle Schnittstelle getrennt oder, noch schlimmer, die Karte versehentlich ausgeschaltet wird, bricht der Aktualisierungsvorgang sofort ab und lässt die Firmware in der Mitte "hängen".

Dieser Zustand ist unproblematisch, wenn die Ausgangsbedingungen wiederhergestellt sind, d.h. die serielle Schnittstelle korrekt angeschlossen und die Karte mit Strom versorgt ist.

	Upd.	ate			

Wenn Sie diese Fehlerbedingung eingeben, wird die folgende Meldung angezeigt. Es ist sehr wichtig, die korrekten Bedingungen wiederherzustellen, da die Karte sonst völlig unbrauchbar ist.

Wenn Sie die serielle Verbindung wiederherstellen und die Karte wieder einschalten, ist es wieder möglich, die Karte zu aktualisieren.

Manual del usuario

Software de actualización de la tarjeta de aplicaciones (Traducción de las instrucciones originales)

# ADVERTENCIAS GENERALES DE SEGURIDAD

ATENCIÓN! Conserve estas instrucciones para futuras consultas • La instalación, las conexiones eléctricas y los ajustes deben ser realizadas por personal calificado, aplicando con rigor la buena técnica y respetando la normativa vigente • Este producto debe destinarse solamente al uso para el cual ha sido diseñado. Cualquier otro uso será considerado indebido y, por ende, peligroso. El fabricante no puede ser considerado responsable de posibles daños derivados de usos indebidos, erróneos o irrazonables del producto • Lea detenidamente las instrucciones antes de comenzar la instalación del producto. Una instalación incorrecta puede ser causa de peligro • Antes de proceder con la instalación, compruebe que el producto se encuentra en perfectas condiciones • No instale el producto en ambientes ni atmósferas explosivas: la presencia de gases o humos inflamables constituyen un grave peligro para la seguridad • Peligro de explosión si la batería se reemplaza con una de tipo incorrecto • El material del embalaje (plástico, poliestireno, etc.) no se debe tirar al medio ambiente y debe mantenerse fuera del alcance de los niños porque es una potencial fuente de peligro.

3.9	PUERTO SERIE PERDIDO	10

Este símbolo indica información útil para el funcionamiento correcto del producto.

Este símbolo indica notas relativas a la seguridad a las que se debe prestar especial atención.

# 1. PROPÓSITO DEL MANUAL

Esta guía describe el uso del software FlashIT. El software debe utilizarse exclusivamente con los productos Ditec. La descripción se proporciona a través de imágenes de las diferentes ventanas, que son gestionadas por el propio software.

# 2. INSTALACIÓN DEL HARDWARE

## 2.1 USB – PROG

La actualización del firmware sólo es posible si se dispone del adaptador USB serie PROG. Este se suministra como herramienta aparte y debe solicitarse al servicio técnico de Ditec. El cable de conexión está incluido.

El dispositivo USB PROG tiene un conector dedicado que se enchufa fácilmente en el conector de la placa que maneja la memoria externa.

Localice el conector de la memoria en la placa a actualizar, tire suavemente de la placa e inserte el USB PROG, teniendo cuidado de respetar el sentido de conexión.

Debe prestarse atención a la dirección de inserción en el conector.

# 3. DETALLES DEL SOFTWARE

## 3.1 PANTALLA INICIAL

Al arrancar, aparece en la pantalla el logotipo de DITEC. La duración de la imagen es de aproximadamente 1 segundo.

#### 3.2 PANTALLA PRINCIPAL

Al finalizar la pantalla inicial, aparece la pantalla principal que aquí se muestra.

### 3.3 IDIOMAS DISPONIBLES

Al iniciar el software, el idioma por defecto es siempre el inglés. Pulsando sobre los idiomas disponibles, se abre un menú desplegable en el que se puede seleccionar el idioma deseado. Una vez seleccionado el nuevo idioma, toda la información se traducirá inmediatamente al nuevo idioma, incluso para las ventanas que aún no estén activas.

## 3.4 SELECCIÓN DE COM

Serial Interface	Serial iterface
COM3 Open Serial Open Serial Select USB port please	COM24 Close serial Is regularly opened and ready to be used.
Service Ok Back	Service OK Back

Antes de iniciar cualquier actividad, se debe activar un puerto serie, que será utilizado por el software para descargar las actualizaciones de la placa.

El puerto serie debe elegirse entre los disponibles en el PC. La lista completa de los disponibles se puede obtener haciendo clic en el cuadro combinado de la esquina superior izquierda (COMxx), en la sección Interfaces. Una vez encontrado el puerto, hay que abrirlo pulsando el botón situado a la derecha del cuadro combinado OPEN SERIAL. Si el puerto serie es apto para su uso, la ventana cambia de color a verde. **NOTA SOBRE EL PUERTO SERIE:** Es muy frecuente que en su PC estén conectados varios puertos serie USB. No es seguro que el puerto serie elegido sea el correcto. Si elige el puerto equivocado, no dañará su PC ni los dispositivos conectados. No ocurre nada grave. Si tienes algo de práctica con dispositivos digitales, como ordenadores, puedes comprobar el número de puerto USB abriendo la página de gestión de dispositivos en la sección Panel de Control. Esta sección proporciona información sobre el número asignado dinámicamente al puerto conectado.

En las imágenes de arriba, puedes ver los cambios resultantes de conectar el USB-PROG antes y después. Cuando se conecta el USB-PROG (en este ejemplo), se crea el puerto COM nº 24.

# 3.5 COMUNICACIÓN DE LA PLACA

Al actualizar el firmware, es especialmente importante que el software se conecte correctamente a la placa afectada por la actualización.

El proceso de conexión se realiza automáticamente, sin necesidad de intervención manual, siempre que se cumpla una condición. Es decir: cuando se enciende la tarjeta, ya se ha lanzado el software y se ha abierto la pantalla que se muestra a continuación.

IP2468ES

Como puede verse, el botón OPEN está habilitado para abrir el archivo de actualización.

Si la tarjeta se enciende antes de que el software esté activo, no habrá conexión.

Para solucionar este problema, es posible (con el software ya activado) apagar y volver a encender la tarjeta. El proceso de conexión se activa aproximadamente medio segundo después de encender la tarjeta por primera vez.

Transcurrido este tiempo, si el software no está abierto, no habrá conexión.

#### 3.6 ABRIR FICHERO

El fichero a cargar debe ser un fichero binario, con la extensión .bin. Además, el tipo de archivo ya viene indicado en el nombre porque lleva el prefijo E\_. Los ficheros con características diferentes no pueden ser tratados y son rechazados automáticamente por el programa.

Nombre de fichero precedido de E\_ :

supply. This automatically connects the software to the board	0%	25%	50%	75%	100
making it possible to update.					
	Up Up	dat			

#### 3.8 FIN DEL PROCESO

El proceso de actualización, una vez iniciado, es automático y no requiere ninguna otra acción. El software supervisa las operaciones de actualización y, al final, se iniciará un reinicio de la tarjeta con la nueva versión instalada.

## 3.9 PUERTO SERIE PERDIDO

Si, durante el proceso de actualización, el puerto serie se desconecta o, peor aún, la placa se apaga por error, el proceso de actualización se detiene inmediatamente, dejando el firmware "colgado" en medio.

Esta condición no es problemática si se restablecen las condiciones iniciales, es decir, el puerto serie conectado correctamente y la tarjeta alimentada.

2) Update					$\times$
UPDATING PROCEDURES	Board Connection	n

					<b>Back</b>

Si se produce esta condición de error, se muestra el siguiente mensaje.

Es muy importante restablecer las condiciones correctas, de lo contrario la placa queda completamente inservible. Restableciendo la conexión serie y encendiendo de nuevo la placa, será posible actualizarla de nuevo.

3.7 3.8 3.9	FIM DO PROCESSO PERDA DA PORTA SÉRIE	7 9 10

Este símbolo indica informações úteis para o correto funcionamento do produto.

Este símbolo indica notas relativas à segurança que requerem uma atenção particular.

# 1. OBJECTIVO DO MANUAL

Este guia descreve a utilização do software FlashIT. O software destina-se a ser utilizado exclusivamente com os produtos Ditec. A descrição é feita através de imagens das diferentes janelas, geridas pelo próprio software.

# 2. INSTALAÇÃO DO HARDWARE

### 2.1 USB – PROG

A atualização do firmware só é possível se se dispuser do adaptador USB da série PROG. Este é fornecido em separado e deve ser solicitado aos serviços da Ditec. O cabo de ligação está incluído.

O dispositivo USB PROG possui um conetor dedicado que se liga facilmente ao conetor da placa que contém a memória externa.

Localizar o conetor da memória na placa a atualizar, puxar cuidadosamente a placa para fora e inserir o USB PROG, respeitando o sentido de ligação.

É necessário prestar atenção à direção de inserção no conetor.

# 3. DETALHES DO SOFTWARE

# 3.1 ECRÃ INICIAL

No arranque, o logótipo DITEC aparece no ecrã. A duração da imagem é de cerca de 1 segundo.

# 3.2 ECRÃ PRINCIPAL

No final do ecrã inicial, aparece o ecrã principal aqui apresentado.

IP2468PT

## 3.3 IDIOMAS DISPONÍVEIS

Ao iniciar o software, o idioma predefinido é sempre o inglês. Ao clicar nos idiomas disponíveis, abre-se um menu pendente no qual se pode selecionar o idioma pretendido. Uma vez selecionada a nova língua, todas as informações serão imediatamente traduzidas para a nova língua, mesmo para as janelas que ainda não estão activas.

## 3.4 SELECÇÃO DA COM

1)COM Selection	× 1) COM Selection	×
Serial Interface	Serial Interface	
COM3 Open Serial Select USB port please	The serial port is not open yet.	s serial s regularly opened and ready to be used.
Service OK	Back Ok	Back

Antes de iniciar qualquer atividade, é necessário ativar uma porta série, que será utilizada pelo software para descarregar as actualizações da placa.

A porta série deve ser escolhida entre as disponíveis no PC. A lista completa das portas disponíveis pode ser obtida clicando na caixa de combinação no canto superior esquerdo (COMxx), na secção Interfaces. Uma vez encontrada a porta, esta deve ser aberta clicando no botão à direita da caixa combinada **OPEN SERIAL**. Se a porta série for adequada para utilização, a janela muda de cor para verde. **NOTA SOBRE A PORTA SERIAL:** É muito frequente haver várias portas seriais USB ligadas ao seu PC. Não é certo que a porta de série escolhida seja a correta. Se escolher a porta errada, não irá danificar o seu PC ou os dispositivos ligados. Não acontece nada de grave. Se tiver alguma prática com dispositivos digitais, como computadores, pode verificar o número da porta USB abrindo a página de gestão de dispositivos na secção Painel de controlo. Esta secção fornece informações sobre o número atribuído dinamicamente à porta ligada.

Nas imagens acima, pode ver as alterações resultantes da ligação do USB-PROG antes e depois. Quando o USB-PROG é ligado (neste exemplo), é criada a porta COM n.º 24.

### 3.5 COMUNICAÇÃO COM A PLACA

Para a atualização do firmware, é particularmente importante que o software se ligue corretamente à placa a que diz respeito a atualização.

O processo de ligação ocorre automaticamente, sem necessidade de intervenção manual, desde que seja cumprida uma condição. Ou seja: quando a placa é ligada, o software já foi lançado e o ecrã abaixo foi aberto.

UPDATING PROCEDURES	Board Connection

IP2468PT

Como se pode ver, o botão OPEN está ativado para abrir o ficheiro de atualização.

Se o cartão for ligado antes de o software estar ativo, não haverá ligação.

Para remediar este problema, é possível (com o software já ativado) desligar e voltar a ligar a placa. O processo de ligação é ativado em cerca de meio segundo após a primeira ligação do cartão. Após este tempo, se o software não estiver aberto, não haverá ligação.

#### 3.6 ABRIR FICHEIRO

O ficheiro a carregar deve ser um ficheiro binário, com a extensão .bin. O tipo de ficheiro também já está indicado no nome, porque é prefixado com E\_. Os ficheiros com caraterísticas diferentes não podem ser tratados e são automaticamente rejeitados pelo software.

Nome do ficheiro com prefixo E\_ :

#### 3.8 FIM DO PROCESSO

O processo de atualização, uma vez iniciado, é automático e não requer qualquer outra ação. O software supervisiona as operações de atualização e, no final, será iniciada uma reposição do cartão com a nova versão instalada.

DITEC S.	p.A Custom Downloader	×
	The microcontroller was correctly updated ! PLEASE NOW DISCONNECT THE USB PROG DEVICE PORT FROM THE BOARD. BY DOING SO, THE SOFTWARE WILL AGAIN PREPARE ITSELF TO PROGRAM A NEW BOARD, IF NECESSARY.	
	ОК	

# 3.9 PERDA DA PORTA SÉRIE

Se, durante o processo de atualização, a porta série for desligada ou, pior ainda, se a placa for desligada por engano, o processo de atualização pára imediatamente, deixando o firmware "pendurado" no meio.

Esta condição não é problemática se as condições iniciais forem restauradas, ou seja, a porta série ligada corretamente e a placa alimentada.

					Back.

Se esta condição de erro ocorrer, é apresentada a seguinte mensagem.

É muito importante restabelecer as condições corretas, caso contrário a placa é completamente inútil. Ao restabelecer a ligação série e ao ligar novamente a placa, será possível actualizá-la novamente.
